

Art lesson scenario

Topic: "Autumn bike" - warm colors. Collage.

Grades 5,6

Duration of classes - 90 minutes

Objectives:

- learning the art of collage,
- knowing warm colors,
- developing creativity through the selection of natural materials from which artistic work will be created

Course of classes:

Explanation:

- the meaning of the term collage as an art technique - a mini lecture with examples of collages in art,
- presenting warm colors with an overview of what is in these colors in nature, which can be used to create artistic work,
- discussion of what other materials a collage can be made from.

After reviewing the presentation and discussing how a collage technique is created, students prepare a painting primer for artistic work. Then they go for a walk to collect elements of nature (e.g. leaves, sticks, cones, twigs, etc.) to make a bicycle on a prepared foundation. They can paint the "gifts of nature" affixed with warm colors. They also use other materials, e.g. haberdashery. After performing artistic works, they show them at the school exhibition.
