

**Subject:** PROTECTION CLOTHING

( between 13-15 age )

**Aim:** Describing the substance and material of protection clothing

**Methodology:** I know, I want to know, I learn topic for five minutes

**Stages:**

1. Verifying previous knowledge ( about metals and non metals).
2. Teachers distributes the table for students to complete:

I know	I want to know	I learn

3. Students work in pairs and complete the first column „I know“. After that, the students complete the second columns „I want to know“. Analysing the new pieces of informations the students complete the 3rd column „I learn“.
4. The teacher brings the protection clothes ( T-shirt, trainers, helmet, socks etc ). The students read the first two columns and if there is some information somebody else knows they complete the 3rd columns if nobody knows the right answer the teacher explains it and introduces new definitions and new words ( e.g. plastic is made from lycra, poliester etc ). Or students find the missing information on their own by using the Internet or books. They add the fourth column „ Where did I find it?“ They present what they have learnt today.
5. Reflextion: The students write about the topic ( for 5 minutes ).
